Create the JumpBox

This document shows you how to use the Azure Portal to create a Windows 10 virtual machine in Azure called "JumpBox". This virtual machine will be used to run PowerShell scripts that will initialize the remaining virtual machines required for the exercises and projects in the Intro to Cybersecurity Nanodegree program.

If you don't have an Azure subscription, create a <u>free account</u> before you begin. You will be given 30 free days and a \$200 credit as a first-timer user. Note that once you pass 30 days or \$200, <u>you will be prompted to upgrade your account</u> to "pay as you go" service model in order to maintain services with Azure. Learn more about Azure free account subscriptions here: https://azure.microsoft.com/en-us/free/free-account-fag/

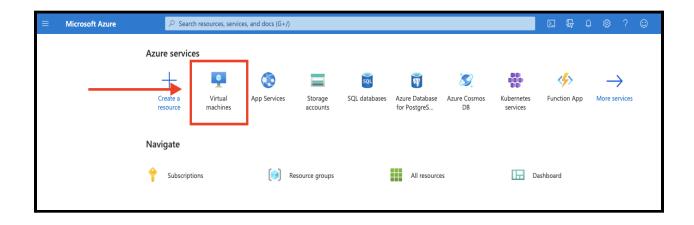

IMPORTANT: Please always remember to shut down the virtual machine when not in use to avoid charges on your Azure account.

Step 1. Sign in to Azure

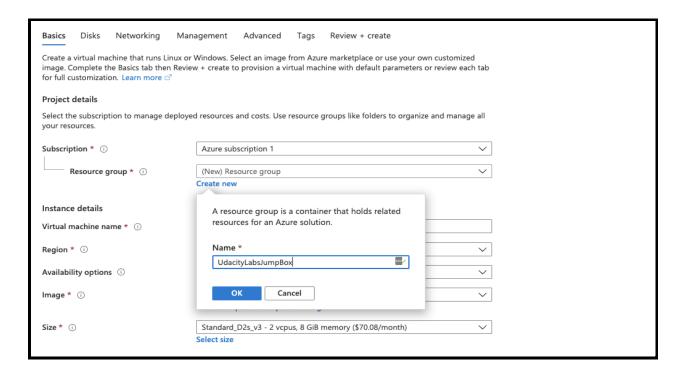

1. Sign in to the Azure portal at https://portal.azure.com.

Step 2. Create a virtual machine

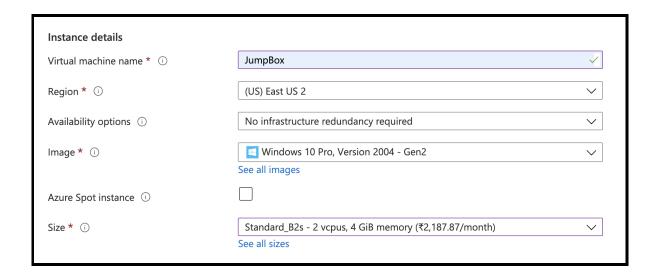

1. Select "Virtual Machines" from the Azure Services menu or type virtual machines in the search and select Virtual Machines.

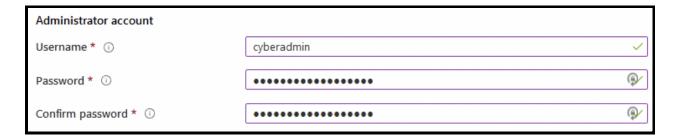

- 2. In the **Virtual machines** page, select **Add**.
- 3. In the **Basics** tab, under **Project details**, note the subscription. If you just created a new account, then you should only have one subscription available. If you have used an Azure account for other projects and have multiple Azure subscriptions, make sure to choose the one you want.
- 4. Then choose to **Create new** resource group. Type *UdacityLabsJumpBox* for the name. Then click "OK."

5. Under Instance details, type JumpBox for the Virtual machine name, choose Fast US2 for your Region, then choose Windows 10 Pro, Version 2004 - Gen2 for the Image and Standard_B2s (2vCPU, 4GiB memory) for the Size. Leave the other defaults.

6. Under the **Administrator account**, provide a username, such as *cyberadmin* and a password. The password must be at least 12 characters long and meet the <u>defined complexity requirements</u>.

You will need this username and password for your VM later when connecting to the JumpBox - be sure to save it or write it down!

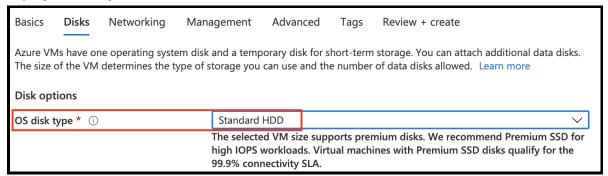

7. Under **Inbound port rules**, choose **Allow selected ports** and then select **RDP** (3389) and **HTTP** (80) from the drop-down.

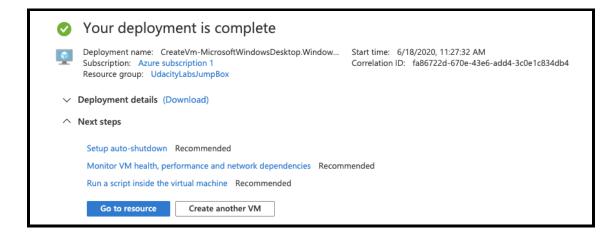

8. Leave the remaining defaults and *check the confirmation box*. Then click on the **Next: Disks** button at the bottom right.

9. Choose **Standard HDD** as the OS disk type and then select the **Review + create** button at the bottom of the page. Once the page updates, select **Create** to finalize deployment of your Virtual Machine.

It will take approximately 10 minutes for your deployment to complete. When your deployment is complete, select Go To Resource to continue with the steps below.

Step 3. Configure the virtual machine

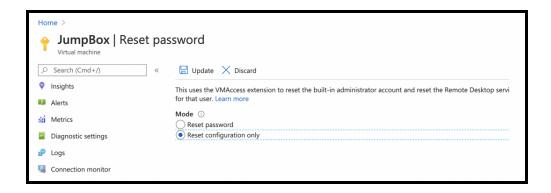

1. Return to the **Virtual machines** page.

2. Click JumpBox. Go to Reset password

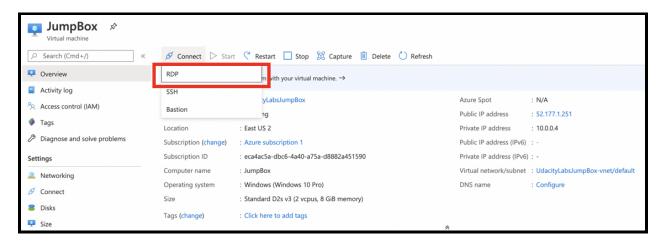

3. Choose Reset configuration only and click update

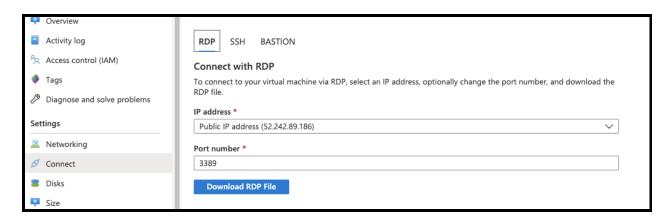

Step 4. Connect to your JumpBox

Mac Users: Before you begin, you need an RDP client such as this <u>Remote Desktop Client</u> from the Mac App Store.

1. Click the **Connect** button on the overview page for your virtual machine and **select RDP** from the dropdown menu.

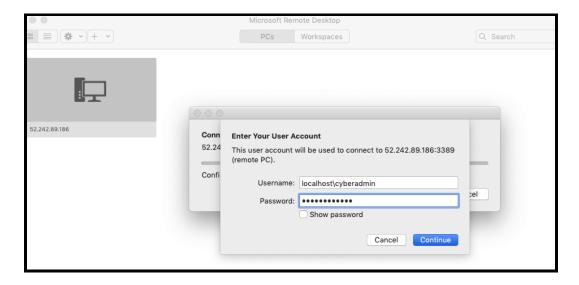

2. In the **Connect** page, keep the default options to connect by **Public IP address**, over port 3389, and click **Download RDP file**.

- 3. Open the downloaded RDP file and click **Connect** when prompted.
- 4. **If you are on a Windows PC:** In the **Windows Security** window, select **More choices** and then select **Use a different account**. Using the administrator account username and password **you created** for your Virtual Machine in Step 2, type the username as **localhost**\username, and enter the password you created, and then click **OK**.

If you are on a Mac: The Microsoft Remote Desktop Client will open when you open the RDP file. Using the administrator account username and password you created for your Virtual Machine in Step 2, type the username as localhost\username, and enter the password you created for the virtual machine, and then click Continue.

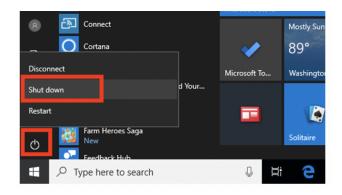

5. You may receive a certificate warning during the sign-in process. Click **Yes** or **Continue** to create the connection.

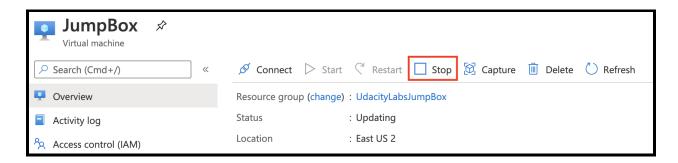

Congratulations! Your JumpBox VM is ready!!!

IMPORTANT: Please always remember to shut down the virtual machine when not in use to avoid charges in your Azure account. The status of the ALL VMs should be stopped

You can shut down the VM by clicking the **Power** button and **"shut down"** inside the VM or click on the **"Stop"** button on the VM overview page.

Click the Power icon and click "shut down" inside the VM

Click the Stop button on the VM overview page

Make sure the status is **Stopped.**
